17 **Asterisks (\* \* \* \*)** indicate the omission of unchanged Code  
18 subsections or parts of tables.

19 Be it ordained by the People of the City and County of San Francisco:

20 Section 1. Findings.

21 (a) The Planning Department has determined that the actions contemplated in this  
22 ordinance comply with the California Environmental Quality Act (California Public Resources  
23 Code Sections 21000 et seq.). Said determination is on file with the Clerk of the Board of  
24 Supervisors in File No. 170159 and is incorporated herein by reference. The Board affirms  
25 this determination.

1 (b) On May 17, 2017, the Building Inspection Commission considered this ordinance at  
2 a duly noticed public hearing pursuant to Charter Section D3.750.5.

3 Section 2. Findings Under California Health and Safety Code. The Board of  
4 Supervisors hereby finds that the following local conditions apply to the amendments to the  
5 Housing Code enacted by this ordinance:

6 (a) The City and County of San Francisco is unique among California communities  
7 with respect to its significant stock of over 500 single room occupancy hotels (“SROs”), which  
8 house approximately 18,000 low-income San Franciscans. SROs are intended to house one  
9 or two individuals and typically measure 8 feet by 10 feet and feature toilet and shower  
10 facilities shared by other SRO occupants. The majority of SRO buildings in San Francisco  
11 were built in the early 1900s, following the 1906 earthquake. SROs tend to be older, and  
12 contain older plumbing, than most of the housing stock in San Francisco. SROs in San  
13 Francisco were built as housing for low-wage workers, transient laborers, and recent  
14 immigrants. However, with decreased demand for unskilled labor in the workforce and as  
15 welfare policies changed and in the 1960s, SROs began to house more unemployed and  
16 elderly people, and deinstitutionalized psychiatric patients.

17 (b) Today, SROs continue to house the most vulnerable populations, including the  
18 indigent, the elderly, and mental health patients. The San Francisco Department of Public  
19 Health has reported that SROs commonly suffer from plumbing issues, including lack of  
20 running water, lack of hot or cold water, and non-functioning showers. In recognition of the  
21 unique characteristics of SROs and other older housing stock in which the most vulnerable  
22 populations reside, unique Housing Code provisions are required to prevent building owners  
23 from exacerbating existing plumbing problems in SROs and other older housing stock.

24 (c) The San Francisco Housing Code (“Housing Code”) mandates minimum  
25 requirements for the “protection of life, limb, health, property, safety and welfare of the general

1 public and the owners and occupants of residential buildings in San Francisco.” Pursuant to  
2 Housing Code Section 1001, a building or portion thereof is “substandard” and a “nuisance” if  
3 it contains inadequate sanitation and safety, such as “lack of, or improper water closet,  
4 lavatory, and bath tub or shower in a dwelling unit”; “lack of, or improper water closets,  
5 lavatories, bath tubs or showers per number of guests in a hotel”; or “lack of hot and cold  
6 running water to plumbing fixtures in a hotel or lodging house.” The use of timers or other  
7 devices that restrict or interrupt water flow from showerheads, other than any water  
8 conservation fixtures required by Chapters 12 and 12A of the Housing Code, constitutes  
9 “inadequate sanitation and safety” under Housing Code Section 1001.

10 (d) It is important to reduce residents’ water usage as part of a plan to address drought  
11 and climate change. However, timers or devices that restrict or interrupt water flow from  
12 showerheads may lead to serious inequities and hardships. Water conservation through the  
13 use of such timers or devices disproportionately benefits landlords and disproportionately  
14 targets tenants of buildings in which such timers and devices are installed. Often, these  
15 buildings are large multi-unit residential buildings, such as SROs, housing the most vulnerable  
16 populations -- including the indigent, the elderly, and mental health patients -- who suffer as a  
17 result of showerheads being equipped with such timers and devices. There are superior  
18 alternatives to address water conservation and regulation of water flow.

19 (e) The goals of both protecting residents’ welfare and reducing water use can be  
20 achieved by regulating showerhead water flow instead of regulating the duration of a shower.  
21 For example, conservation can be achieved by requiring the installation of updated plumbing  
22 fixtures designed to improve efficiency without significantly decreasing performance. The  
23 California Energy Commission anticipates that, once all showerheads and faucets have been  
24 updated by 2029, the reduced flow will save 38 billion gallons of water, 20.2 billion cubic feet  
25 of natural gas, and 1,322 gigawatt hours of electricity per year. This approach is more

1 effective and more equitable than installing timers or other devices that restrict water flow from  
2 showerheads, particularly where such timers or devices are being used in below-market  
3 housing. Property owners concerned about water usage should install low-flow showerheads,  
4 faucets, toilets, and washing machines.

5 (f) California Health and Safety Code Sections 17958 and 17958.5 allow the City to  
6 make changes or modifications in the requirements contained in the provisions published by  
7 the California Building Standards Commission when those changes or modifications are  
8 reasonably necessary because of local climatic, geological, or topographical conditions.  
9 California Health and Safety Code Section 17958.7 provides that before making any such  
10 changes or modifications, the governing body must make express findings that such changes  
11 or modifications are reasonably necessary because of the specified local conditions, and  
12 those findings shall be filed with the California Building Standards Commission.

13 (g) Pursuant to the applicable California Health and Safety Code sections, the Board  
14 of Supervisors finds and determines that the conditions described above constitute a general  
15 summary of the most significant local conditions giving rise to the need for variance from the  
16 California Building and Plumbing Codes and any other applicable provisions published by the  
17 California Building Standards Commission. Further, the Board of Supervisors finds and  
18 determines that the proposed variances are reasonably necessary based on these local  
19 conditions, and that these conditions justify more restrictive standards applicable to the  
20 showerhead fixtures in residential buildings in San Francisco.

21 Section 3. The Housing Code is hereby amended by revising Section 505, to read as  
22 follows:

23 **SEC. 505. SANITATION.**

24 \* \* \* \*

25 (d) Fixtures.

1 (1) All plumbing fixtures shall be connected to a sanitary sewer. All plumbing  
2 fixtures shall be connected to an approved system of water supply and required fixtures shall  
3 be provided with hot and cold running water, except water closets shall be provided with cold  
4 water only.

5 (2) All plumbing fixtures shall be of an approved nonabsorbent material. *No timers*  
6 *or devices, other than water conservation fixtures required by Chapters 12 and 12A of this Code, shall*  
7 *be permitted to restrict or interrupt the water flow from showerheads installed in any dwellings,*  
8 *apartment houses, dormitories, lodging houses, and hotels, as defined in this Code; provided, however,*  
9 *that the prohibition set forth in section 505(d)(2) shall not apply to owner-occupied dwelling units.*

10 (3) For the purposes of this Section, water heated to a minimum temperature of  
11 105 degrees Fahrenheit (41 degrees Centigrade) and a maximum of 120 degrees Fahrenheit  
12 (49 degrees Centigrade) at the tap shall be furnished to hotels and apartment houses.

13 (4) Each building shall provide four gallons of hot water storage capacity per guest  
14 room and eight gallons of hot water storage capacity per dwelling unit.

15 (5) Shower heads with no more than a ~~three-gallon-per-minute~~ 2.5-gallon-per-  
16 minute flow shall be required. Showerheads of the ball-joint type that cannot easily be  
17 removed from the wall without structural alteration are exempt from this requirement.

18 \* \* \* \*

19  
20 Section 4. Effective Date. This ordinance shall become effective 30 days after  
21 enactment. Enactment occurs when the Mayor signs the ordinance, the Mayor returns the  
22 ordinance unsigned or does not sign the ordinance within ten days of receiving it, or the Board  
23 of Supervisors overrides the Mayor's veto of the ordinance.

1 Section 5. Scope of Ordinance. In enacting this ordinance, the Board of Supervisors  
2 intends to amend only those words, phrases, paragraphs, subsections, sections, articles,  
3 numbers, punctuation marks, charts, diagrams, or any other constituent parts of the Municipal  
4 Code that are explicitly shown in this ordinance as additions, deletions, Board amendment  
5 additions, and Board amendment deletions in accordance with the "Note" that appears under  
6 the official title of the ordinance.

7  
8 Section 6. Undertaking for the General Welfare. In enacting and implementing this  
9 ordinance, the City is assuming an undertaking only to promote the general welfare. It is not  
10 assuming, nor is it imposing on its officers and employees, an obligation for breach of which it  
11 is liable in money damages to any person who claims that such breach proximately caused  
12 injury.

13  
14 Section 7. Directions to Clerk. The Clerk of the Board of Supervisors is hereby  
15 directed to forward a copy of this ordinance to the California Building Standards Commission  
16 upon final passage as required by State law.
