13 Section 1. Findings.

14 (a) The Wild Parrots of San Francisco, which belong to the species *Psittacara*  
15 *Erythrogenys*, are a unique and beloved feature of San Francisco's natural environment.

16 (b) Commonly known as the Cherry-headed Conures within the pet industry, and  
17 the Red-masked Parakeets by ornithologists, the Wild Parrots of San Francisco are originally  
18 from Ecuador and Peru, but have made their home in our City.

19 (c) The Wild Parrots of San Francisco have become a symbol of the city's diversity,  
20 sociability, and resilience, having adapted to life in an urban environment.

21 (d) The Wild Parrots of San Francisco are a reminder of the importance of  
22 appreciating the natural world, and the need to support efforts to conserve wildlife and natural  
23 habitats.

24 (e) While there are wild parrots living in every major city in the world, the Wild  
25 Parrots of San Francisco have their own language dialect, with a specific system of calls and

1 responses that are distinct from conure populations found elsewhere, making them truly  
2 unique to San Francisco.

3 (f) The Wild Parrots of San Francisco are raucous and noisy, wild and free, and  
4 travel in tightknit flocks that exhibit acts of solidarity, much like their human San Franciscan  
5 counterparts, who are known for their vocal public input, fierce independence, and deep love  
6 of community.
